PROGRAMME
GUIDE – WESTVILLE
CAMPUS

This programme is tailor made for students that are interested in using physics principles for developing new systems and technologies. It has an application based approach compared to the normal pure branch of physics and is used in various setups and devices.

Being a highly practical programme, diverse technology and innovation including applied Photonics, fibre optics, classical and quantum optics, instrumentation electronics and open source electronics are included in the training. Students graduating from this programme has a variety of job opportunities to explore.
